5400 RPM - SATA Product Manual

Standard models

ST2000LX001
ST1000LX015
ST500LX025

Document Revision History

Revision	Date	Pages affected and Description of change
Rev. A	07/05/2016	Initial release.
Rev. B	08/18/2016	5, 13, 18 & 20: Re-Branded to FireCuda. 16: Added warning statement for Class B devices in Korean
Rev. C	08/31/2016	5-6: Added NAND flash text
Rev. D	11/14/2016	fc: Added FireCuda logo to cover page 5: Add MTC bullet & change Perpendicular recording to SMR 9: Revise Section 2.7.1 Power consumption & Table 4 DC Power Requirements 12: Revise Section 2.7.4 Power management modes 16: Updated Korean text for MSIP statement
Rev. E	02/22/2017	fc: New horizontal FireCuda logo 7: Added Power-off/Flush Command note after Table 1 7 & 16: Revised Rated Workload statements 16: Added Section 2.11.1 Data loss under power interruption with write cache enabled 19-20: Updated 2-disk mechanical drawing & added 1-disk drawing

1.0   Introduction

This manual describes the functional, mechanical and interface specifications for the following Seagate® FireCuda™ model drives:

Standard models
ST2000LX001
ST1000LX015
ST500LX025

These drives provide the following key features:
- 1000 Gs non-operating shock and 400 Gs of operating shock.
- 128MB buffer.
- 5400-RPM spindle speed.
- Flash-accelerated drives combining 8GB NAND technology with massive HDD storage capacity up to 2TB.
- Full-track multiple-sector transfer capability without local processor intervention.
- High instantaneous (burst) data-transfer rates (up to 6Gb/s).
- MTC Technology^{TM}, proprietary data flow management.
- Native Command Queuing (NCQ) with command ordering.
- Quiet operation. Fluid Dynamic Bearing (FDB) motor.
- SeaTools^{TM} diagnostic software performs a drive self-test that eliminates unnecessary drive returns.
- Shingled magnetic recording with perpendicular magnetic recording heads/media.
- State-of-the-art cache and on-the-fly error-correction algorithms.
- Support for Read Multiple and Write Multiple commands.
- Support for S.M.A.R.T. drive monitoring and reporting.
- Worldwide Name (WWN) capability uniquely identifies the drive.

1.1   About the Serial ATA Interface

The Serial ATA interface provides several advantages over the traditional (parallel) ATA interface. The primary advantages include:
- Easy installation and configuration with true plug-and-play connectivity. It is not necessary to set any jumpers or other configuration options.
- Thinner and more flexible cabling for improved enclosure airflow and ease of installation.
- Scalability to higher performance levels.

In addition, Serial ATA makes the transition from parallel ATA easy by providing legacy software support. Serial ATA was designed to allow users to install a Serial ATA host adapter and Serial ATA disk drive in the current system and expect all of the existing applications to work as normal.

The Serial ATA interface connects each disk drive in a point-to-point configuration with the Serial ATA host adapter. There is no master/slave relationship with Serial ATA devices like there is with parallel ATA. If two drives are attached on one Serial ATA host adapter, the host operating system views the two devices as if they were both "masters" on two separate ports. This essentially means both drives behave as if they are Device 0 (master) devices.

Note	The host adapter may, optionally, emulate a master/slave environment to host software where two devices on separate Serial ATA ports are represented to host software as a Device 0 (master) and Device 1 (slave) accessed at the same set of host bus addresses. A host adapter that emulates a master/slave environment manages two sets of shadow registers. This is not a typical Serial ATA environment.

The Serial ATA host adapter and drive share the function of emulating parallel ATA device behavior to provide backward compatibility with existing host systems and software. The Command and Control Block registers, PIO and DMA data transfers, resets, and interrupts are all emulated.

The Serial ATA host adapter contains a set of registers that shadow the contents of the traditional device registers, referred to as the Shadow Register Block. All Serial ATA devices behave like Device 0 devices. For additional information about how Serial ATA emulates parallel ATA, refer to the *Serial ATA International Organization: Serial ATA* (Revision 2.6). The specification can be downloaded from www.serialata.org.

2.0 Drive Specifications

Unless otherwise noted, all specifications are measured under ambient conditions, at 25°C, and nominal power. For convenience, the phrases *the drive* and *this drive* are used throughout this manual to indicate the following drive models:

The specification summaries listed in the following tables are for quick reference. For details on specification measurement or definition, refer to the appropriate section of this manual.

Table 1   Drive Specifications Summary

Drive Specification	ST2000LX001	ST1000LX015	ST500LX025
Formatted capacity [1]	2TB	1TB	500GB
Guaranteed sectors	3,907,029,168	1,953,525,168	976,773,168
Heads	4	2	
Disks	2	1	
NAND flash Commercial Multilevel Cell (cMLC)	8GB		
Bytes per sector	512 (logical) / 4096 (physical)		
Recording density	2296 KFC/in		
Track density	580 KTP/in avg		
Areal density	1327 Mb/in^2 avg		
Spindle speed	5400 RPM		
Data transfer rate (up to)	140 MB/s		
Interface	SATA 6Gb/s		
ATA data-transfer modes supported	PIO modes 0–4 Multiword DMA modes 0–2 Ultra DMA modes 0–6		
Cache buffer	128 MB		
Height (mm/in)	7.0 (± 0.2) / 0.276 (± 008)		
Width (mm/in)	69.85 (± 0.25) / 2.750 (± 0.010)		
Length (mm/in)	100.35 (+0.20/-0.25) / 3.951 (+0.008/-0.010)		
Weight (g/lb) max	96 / 0.212	92 / 0.203	
Average latency	5.6 ms		
Startup current, Max (+5V)	1.0 A		
Voltage tolerance (including noise)	5V ± 5%		
Operating temperature	0° to 60°C		
Non-operating temperature (ambient)	–40° to 70°C		
Temperature gradient	20°C per hour max (operating) 35°C per hour max (non-operating)		
Relative humidity	5% to 95% (operating) 5% to 95% (non-operating)		
Relative humidity gradient (max)	30% per hour		
Wet bulb temperature	37.7°C max (operating) 40.0°C max (non-operating)		
Altitude, operating	–304.8 m to 3048 m (–1000 ft to 10,000+ ft)		
Altitude, non-operating (below mean sea level, max)	–304.8 m to 12,192 m (–1000 ft to 40,000+ ft)		

Table 1   Drive Specifications Summary (continued)

Drive Specification	ST2000LX001	ST1000LX015	ST500LX025
Operational Shock	400 Gs at 2 ms max		
Non-Operational Shock	1000 Gs at 1 ms max		
Vibration, operating	5–200 Hz: 2.0 Gs 201–500 Hz: 1.0 Gs		
Vibration, non-operating	5–500 Hz: 5.0 Gs		
Nonrecoverable read errors	1 per 10^{14} bits read		
Rated workload	Average annualized workload rating: <55 TB/year. The specifications for the product assumes the I/O workload does not exceed the average annualized workload rate limit of 55 TB/year. Workloads exceeding the annualized rate may degrade and impact reliability as experienced by the particular application. The average annualized workload rate limit is in units of TB per calendar year.		
Warranty	To determine the warranty for a specific drive, use a web browser to access the following web page: http://www.seagate.com/support/warranty-and-replacements/. From this page, click on the "Is my Drive under Warranty" link. The following are required to be provided: the drive serial number, model number (or part number) and country of purchase. The system will display the warranty information for the drive.		
Load-unload cycles	600,000 at 25℃, 50% rel. humidity		
Supports Hotplug operation per the Serial ATA Revision 3.2 specification	Yes		

1.   One GB equals one billion bytes when referring to hard drive capacity. Accessible capacity may vary depending on operating environment and formatting.

Note	If the drive is powered-off before issuing flush cache command, in some instances, the end user data in the DRAM cache might not be committed to the disk.

2.1   Formatted Capacity

Model	Formatted Capacity[1]	Guaranteed Sectors	Bytes per Sector
ST2000LX001	2000 GB	3,907,029,168	
ST1000LX015	1000 GB	1,953,525,168	512 (logical) / 4096 (physical)
ST500LX025	500 GB	976,773,168	

1.   One GB equals one billion bytes when referring to hard drive capacity. Accessible capacity may vary depending on operating environment and formatting.

2.1.1   LBA mode

When addressing these drives in LBA mode, all blocks (sectors) are consecutively numbered from 0 to $n-1$, where n is the number of guaranteed sectors as defined above.

Refer to **Configuring and Mounting the Drive** on page 19 (words 60-61 and 100-103) for additional information about 48-bit addressing support of drives with capacities over 137 GB.

2.2   Physical organization

Drive model	Read/write heads	Number of discs
ST2000LX001	4	2
ST1000LX015	2	1
ST500LX025	2	1

2.3   Recording and Interface Technology

Interface	SATA 6Gb/s
Recording method	Perpendicular
Recording density	2276 Kb/in
Track density	580 ktracks/in avg
Areal density	1320 Gb/in^2 avg
Spindle speed	5400 RPM
Data transfer rate (up to)	140 MB/s

2.4   Physical Characteristics

Height (mm/in)	7.0 (± 0.2) / 0.276 (± 008)
Width (mm/in)	69.85 (± 0.25) / 2.750 (± 0.010)
Length (mm/in)	100.35 (+0.20/-0.25) / 3.951 (+0.008/-0.010)
Typical weight (g/lb) (2-Disk models)	96 / 0.212
Typical weight (g/lb) (1-Disk models)	92/ 0.203
Cache buffer	128MB

2.5   Seek time

Seek measurements are taken with nominal power at 25°C ambient temperature. All times are measured using drive diagnostics. The specifications in the table below are defined as follows:
•   Track-to-track seek time is an average of all possible single-track seeks in both directions.
•   Average seek time is a true statistical random average of at least 5000 measurements of seeks between random tracks, less overhead.

Table 2   Typical seek times

Typical seek times (ms)	Read
Track-to-track	1.5
Average	13.0
Average latency	5.6

Note	These drives are designed to consistently meet the seek times represented in this manual. Physical seeks, regardless of mode (such as track-to-track and average), are expected to meet the noted values. However, due to the manner in which these drives are formatted, benchmark tests that include command overhead or measure logical seeks may produce results that vary from these specifications.

2.6   Start/stop times

Table 3   Start/stop times

Typical seek times (ms)	Typical	Max @ 25°C
Power-on to ready (sec)	0.6	0.8
Standby to ready (sec)	2.5	3.0

2.7   Power Specifications

The drive receives DC power (+5V) through a native SATA power connector (refer to **Figure 3**).

2.7.1   Power consumption

Power requirements for the drives are listed in the table in **Table 4**. Typical power measurements are based on an average of drives tested, under nominal conditions, at 25°C ambient temperature. These power measurements are done with DIPM enabled.

- Spinup current is measured from the time of power-on to the time that the drive spindle reaches operating speed.
- Read/Write current is measured with the heads on track, based on three 64 sector read or write operations every 100 ms.
- The drive supports three idle modes: Performance Idle mode, Active Idle mode and Low Power Idle mode. Refer to Section 2.7.4 for power-management modes.

Table 4   DC Power Requirements

Power Dissipation	2-Disk models +5V input average (25° C)	1-Disk models +5V input average (25° C)
Spinup (max)	1.00A	
Write average	1.80W	1.70W
Read average	1.70W	1.60W
Idle, low power mode	0.50W	0.45W
Standby[1]	0.13W	
Sleep	0.13W	

1.   Standby power is measured at steady state (after 200ms from transition)

2.7.1.1 Typical current profiles

The typical 5V startup and operation current profile is shown in **Figure 1** and **Figure 2**.

Figure 1   Typical 1D - 5V Startup and Operation Current Profile
Figure 2   Typical 2D - 5V Startup and Operation Current Profile
2.7.2   Conducted noise

Input noise ripple is measured at the host system power supply across an equivalent 15-ohm resistive load on the +5 volt line.
• Using 5-volt power, the drive is expected to operate with a maximum of 100 mV peak-to-peak square-wave injected noise at up to 20 MHz.

Note	Equivalent resistance is calculated by dividing the nominal voltage by the typical RMS read/write current.

2.7.3   Supply Voltage

Allowable voltage	5V ± 5%
Allowable noise/ripple	100 p-p max, 0-20 MHz
Allowable supply rise time	<100 ms

2.7.4   Power management modes

The drive provides programmable power management to provide greater energy efficiency. In most systems, power management is controlled through the system setup program. The drive features the following power-management modes:

Power modes	Heads	Spindle	Electronics
Active (operating)	Tracking	Rotating	Full power
Idle, performance	Tracking	Rotating	Partial Power
Idle, active	Floating	Rotating	Partial Power
Idle, low power	Parked	Rotating	Partial Power
Standby	Parked	Stopped	Low Power
Sleep	Parked	Stopped	Low Power

- **Active mode**
  The drive is in Active mode during the read/write and seek operations.

- **Idle mode**
  The electronics remains powered, and the drive accepts all commands and returns to Active mode when disk access is necessary.

- **Standby mode**
  The drive enters Standby mode immediately when the host sends a Standby Immediate command. If the host has set the standby timer, the drive can also enter Standby mode automatically after the drive has been inactive for a specifiable length of time. The standby timer delay is established using a Standby or Idle command. In Standby mode, the electronics are in low power mode, the heads are parked and the spindle is at rest. The drive accepts all commands and returns to Active mode when disk access is necessary.

- **Sleep mode**
  The drive enters Sleep mode after receiving a Sleep command from the host. In Sleep mode, the electronics are in low power mode, the heads are parked and the spindle is at rest. The drive leaves Sleep mode after it receives a Hard Reset or Soft Reset from the host. After receiving a reset, the drive exits Sleep mode and enters Standby mode.

- **Idle and standby timers**
  Each time the drive performs an active function (read, write or seek), the standby timer is reinitialized and begins counting down from its specified delay times to zero. If the standby timer reaches zero before any drive activity is required, the drive makes a transition to Standby mode. In both Idle and Standby mode, the drive accepts all commands and returns to Active mode when disk access is necessary.

2.8 Environmental Specifications

This section provides the temperature, humidity, shock, and vibration specifications for FireCuda drives.

Ambient temperature is defined as the temperature of the environment immediately surrounding the drive.

Above 1000 feet (305 meters), the maximum temperature is derated linearly by 1°C every 1000 feet.

Table 5: Environmental specifications

Parameters	Operating	Non-Operating
Ambient temperature	0° to 60°C (32° to 140°F)	-40° to 70°C (-40° to 158°F)
Temperature gradient	20°C per hour (68°F per hour) max, without condensation	35°C per hour (95°F per hour) max, without condensation
Humidity	5% to 95% non-condensing (30% per hour)	5% to 95% non-condensing (30% per hour)
Wet bulb	37.7°C (99.8°F) max	40°C (104°F) max
Altitude	-304.8m to 3048m (-1000ft to 10,000ft)	-304.8m to 12,192m (-1000ft to 40,000ft)

Note	The recommended storage period: • 1 year under controlled conditions of 34°C 90%RH or less • 90 days in uncontrolled storage conditions

2.8.1 Shock

All shock specifications assume that the drive is mounted securely with the input shock applied at the drive mounting screws. Shock may be applied in the X, Y, or Z axis.

2.8.1.1 Operating shock

These drives comply with the performance levels specified in this document when subjected to a maximum operating shock of 400 Gs based on half-sine shock pulses of 2ms. Shocks should not be repeated more than one time per axis.

2.8.1.2 Non-operating shock

The non-operating shock level that the drive can experience without incurring physical damage or degradation in performance when subsequently put into operation is 1000 Gs based on a nonrepetitive half-sine shock pulse of 1 ms duration.

2.8.2   Vibration

All vibration specifications assume that the drive is mounted securely with the input vibration applied at the drive mounting screws. Vibration may be applied in the X, Y, or Z axis.

2.8.2.1   Operating vibration

The maximum vibration levels that the drive may experience while meeting the performance standards specified in this document are specified below.

5–200 Hz	2.0 Gs (0 to peak). Max displacement may apply below 10 Hz.
201–500 Hz	1.0 Gs (0 to peak).

2.8.2.2   Non-operating vibration

The maximum non-operating vibration levels that the drive may experience without incurring physical damage or degradation in performance when subsequently put into operation are specified below.

5–500 Hz	5.0 Gs (0 to peak). Max displacement may apply below 22 Hz.

2.9   Acoustics

Drive emission of sound is measured consistent with the ECMA-74 and its referenced standards. Testing is conducted at room temperature (approximately 25°C). Emission levels are reported as the total A-weighted sound power levers for steady state, idle, and active seeks modes of operation.

Table 6   Drive A-weighted Sound Power Levels (SWL, BA)

Models	2-Disk	1-Disk
Idle[1]	2.2 bels (typ) 2.4 bels (max)	2.0 bels (typ) 2.2 bels (max)
Performance Seek	2.4 bels (typ) 2.6 bels (max)	2.2 bels (typ) 2.4 bels (max)

1. During periods of drive idle, some offline activity may occur according to the S.M.A.R.T. specification, which may increase acoustic and power to operational levels.

2.9.1   Test for prominent discrete tones (PDTs)

Seagate follows the ECMA-74 standards for measurement and identification of PDTs. An exception to this process is the use of the absolute threshold of hearing. Seagate uses the lower limit for the threshold curve* to discern tone audibility and to compensate for the inaudible components of sound prior to computation of tone ratios according to Annex D of the ECMA-74 standards.

*Defined as the median curve given by ISO 389-7 (Tf curve) minus 10dB at all frequencies.

2.10 Electromagnetic Immunity

When properly installed in a representative host system, the drive operates without errors or degradation in performance when subjected to the radio frequency (RF) environment as defined in **Table 7**.

Table 7 Radio Frequency Environments

Test	Description	Performance Level	Reference Standard
Electrostatic discharge	Contact, HCP, VCP: ± 4 kV; Air: ± 8 kV	B	EN 61000-4-2: 95
Radiated RF immunity	80 to 1GHz, 3 V/m, 80% AM with 1 kHz sine 900 MHz, 3 V/m, 50% pulse modulation @ 200 Hz	A	EN 61000-4-3: 96 ENV 50204: 95
Electrical fast transient	± 1 kV on AC mains, ± 0.5 kV on external I/O	B	EN 61000-4-4: 95
Surge immunity	± 1 kV differential, ± 2 kV common, AC mains	B	EN 61000-4-5: 95
Conducted RF immunity	150 kHz to 80 MHz, 3 Vrms, 80% AM with 1 kHz sine	A	EN 61000-4-6: 97
Power Frequency H-field immunity	1 A/m, 50Hz/60Hz, 3 axes	A	EN 61000-4-8: 97
Voltage dips, interrupts	30% Reduction for 25 cycles >95% Reduction for 250 cycles >95%, 0.5 cycles	C C B	EN 61000-4-11: 94

2.10.1 DC Magnetic Field Immunity

Table 8: DC Magnetic Field Immunity

Test	Product Spec (Standalone)
DC Magnetic Field Immunity [1, 2, 3]	400 Gauss, RMS

[1] Field in Gauss at the drive envelope. Testing per procedures 20800109-349 and 20800109-350.
[2] Passing Field in Gauss at the drive envelope. In practice, testing is conducted using a fixed distance from the bottom of the magnet to the top of the drive. Calibration of the field vs. distance is done with a Hall probe with no magnetic materials present.
[3] Testing to be done with magnet.375" dia. x 0.100" Ni-plated NdFeB; B,~11.5 kG, magnetized along its length; the magnet is oriented with the length perpendicular to the drive cover/PCBA. Drive to be properly secured during test.

2.11   Reliability

Nonrecoverable read errors	1 per 10^{14} bits read, max
Load/Unload (U/UL) 25°C, 50% relative humidity	600,000 software-controlled power on/off cycles 20,000 hard power on/off cycles
Rated workload	Average annualized workload rating: <55 TB/year. The specifications for the product assumes the I/O workload does not exceed the average annualized workload rate limit of 55 TB/year. Workloads exceeding the annualized rate may degrade and impact reliability as experienced by the particular application. The average annualized workload rate limit is in units of TB per calendar year.
Warranty	To determine the warranty for a specific drive, use a web browser to access the following web page: http://www.seagate.com/support/warranty-and-replacements/. From this page, click on the "Is my Drive under Warranty" link. The following are required to be provided: the drive serial number, model number (or part number) and country of purchase. The system will display the warranty information for the drive.

2.11.1   Data loss under power interruption with write cache enabled

Drive preserves its data during all operations except in cases where power to the drive is interrupted during write operations. This could result in either an uncorrected data error being reported, or the entire sector/track becoming unreadable. This can be permanently recovered by rewriting to the same location on the drive. Additionally any data present in the DRAM buffer will not be written to the disk media, additionally, the drive will not be able to return the original data.

In order to prevent this data loss, the host should issue a standby immediate or flush cache command before a controlled power off operation to the drive.

2.12   Agency Certification

2.12.1   Safety certification

These products are certified to meet the requirements of UL60950-1, CSA60950-1 and EN60950 and so marked as to the certify agency.

The following regulatory model number represent all features and configurations within the series:

Regulatory Model Numbers: SDC002/SDC004

2.12.2   Electromagnetic Compatibility (EMC)

Hard drives that display the CE mark comply with the European Union (EU) requirements specified in the Electromagnetic Compatibility Directive 2004/108/EC (Until 19th April, 2016) and 2014/30/EU (From 20th April, 2016). Testing is performed to the levels specified by the product standards for Information Technology Equipment (ITE). Emission levels are defined by EN 55022, Class B and the immunity levels are defined by EN 55024.

Drives are tested in representative end-user systems. Although CE-marked Seagate drives comply with the directives when used in the test systems, we cannot guarantee that all systems will comply with the directives. The drive is designed for operation inside a properly designed enclosure, with properly shielded I/O cable (if necessary) and terminators on all unused I/O ports. Computer manufacturers and system integrators should confirm EMC compliance and provide CE marking for their products.

Korean RRA

If these drives have the Korean Communications Commission (KCC) logo, they comply with paragraph 1 of Article 11 of the Electromagnetic Compatibility control Regulation and meet the Electromagnetic Compatibility (EMC) Framework requirements of the Radio Research Agency (RRA) Communications Commission, Republic of Korea.

These drives have been tested and comply with the Electromagnetic Interference/Electromagnetic Susceptibility (EMI/EMS) for Class B products. Drives are tested in a representative, end-user system by a Korean-recognized lab.

기 종 별	사 용 자 안 내 문
B급 기기 (가정용 방송통신기자재)	이 기기는 가정용(B급) 전자파적합기기로서 주로 가정에서 사용하는 것을 목적으로 하며, 모든 지역에서 사용할 수 있습니다.

Australian RCM Compliance Mark

Models displayed with the RCM compliance mark, comply with the mandatory standards as per the Australian Communications and Media Authority (ACMA) Electromagnetic Compatibility (EMC) regulatory arrangement.

2.12.3   FCC verification

These drives are intended to be contained solely within a personal computer or similar enclosure (not attached as an external device). As such, each drive is considered to be a subassembly even when it is individually marketed to the customer. As a subassembly, no Federal Communications Commission verification or certification of the device is required.

Seagate has tested this device in enclosures as described above to ensure that the total assembly (enclosure, disk drive, motherboard, power supply, etc.) does comply with the limits for a Class B computing device, pursuant to Subpart J, Part 15 of the FCC rules. Operation with noncertified assemblies is likely to result in interference to radio and television reception.

Radio and television interference. This equipment generates and uses radio frequency energy and if not installed and used in strict accordance with the manufacturer's instructions, may cause interference to radio and television reception.

This equipment is designed to provide reasonable protection against such interference in a residential installation. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause interference to radio or television, which can be determined by turning the equipment on and off, users are encouraged to try one or more of the following corrective measures:
- Reorient the receiving antenna.
- Move the device to one side or the other of the radio or TV.
- Move the device farther away from the radio or TV.
- Plug the computer into a different outlet so that the receiver and computer are on different branch outlets.

If necessary, users should consult the dealer or an experienced radio/television technician for additional suggestions. Users may find helpful the following booklet prepared by the Federal Communications Commission: *How to Identify and Resolve Radio-Television Interference Problems*. This booklet is available from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402. Refer to publication number 004-000-00345-4.

2.13   Environmental Protection

Seagate designs its products to meet environmental protection requirements worldwide, including regulations restricting certain chemical substances.

2.13.1   European Union Restriction of Hazardous Substances (RoHS) Directive

The European Union Restriction of Hazardous Substances (RoHS) Directive, restricts the presence of chemical substances, including Lead, Cadmium, Mercury, Hexavalent Chromium, PBB and PBDE, in electronic products, effective July 2006. This drive is manufactured with components and materials that comply with the RoHS Directive.

2.13.2 China Requirements — China RoHS 2

China RoHS 2 refers to the Ministry of Industry and Information Technology Order No. 32, effective July 1, 2016, titled Management Methods for the Restriction of the Use of Hazardous Substances in Electrical and Electronic Products. To comply with China RoHS 2, we determined this product's Environmental Protection Use Period (EPUP) to be 20 years in accordance with the *Marking for the Restricted Use of Hazardous Substances in Electronic and Electrical Products,* SJT 11364-2014.

中国电器电子产品有害物质限制使用管理办法

(Management Methods for the Restriction of the Use of Hazardous Substances in Electrical and Electronic Products _ China RoHS)

产品中有害物质的名称及含量

机壳 Chassis	X	O	O	O	O	O

本表格依据 **SJ/T 11364** 的规定编制。

This table is prepared in accordance with the provisions of SJ/T 11364-2014

O：表示该有害物质在该部件所有均质材料中的含量均在 **GB/T 26572** 规定的限量要求以下。

O: Indicates that the hazardous substance contained in all of the homogeneous materials for this part is below the limit requirement of GB/T26572.

X：表示该有害物质至少在该部件的某一均质材料中的含量超出 **GB/T 26572** 规定的限量要求。

X: Indicates that the hazardous substance contained in at least one of the homogeneous materials used for this part is above the limit requirement of GB/T26572.

2.14   Corrosive Environment

Seagate electronic drive components pass accelerated corrosion testing equivalent to 10 years exposure to light industrial environments containing sulfurous gases, chlorine and nitric oxide, classes G and H per ASTM B845. However, this accelerated testing cannot duplicate every potential application environment.

Users should use caution exposing any electronic components to uncontrolled chemical pollutants and corrosive chemicals as electronic drive component reliability can be affected by the installation environment. The silver, copper, nickel and gold films used in Seagate products are especially sensitive to the presence of sulfide, chloride, and nitrate contaminants. Sulfur is found to be the most damaging. In addition, electronic components should never be exposed to condensing water on the surface of the printed circuit board assembly (PCBA) or exposed to an ambient relative humidity greater than 95%. Materials used in cabinet fabrication, such as vulcanized rubber, that can outgas corrosive compounds should be minimized or eliminated. The useful life of any electronic equipment may be extended by replacing materials near circuitry with sulfide-free alternatives.

3.0   Configuring and Mounting the Drive

This section contains the specifications and instructions for configuring and mounting the drive.

3.1   Handling and Static-Discharge Precautions

After unpacking, and before installation, the drive may be exposed to potential handling and electrostatic discharge (ESD) hazards. Observe the following standard handling and static-discharge precautions.

CAUTION	• Keep the drive in the electrostatic discharge (ESD) bag until ready for installation to limit the drive's exposure to ESD. • Before handling the drive, put on a grounded wrist strap, or ground yourself frequently by touching the metal chassis of a computer that is plugged into a grounded outlet. Wear a grounded wrist strap throughout the entire installation procedure. • Handle the drive by its edges or frame *only*. • The drive is extremely fragile—handle it with care. Do not press down on the drive top cover. • Always rest the drive on a padded, antistatic surface until mounting it in the computer. • Do not touch the connector pins or the printed circuit board. • Do not remove the factory-installed labels from the drive or cover them with additional labels. Removal voids the warranty. Some factory-installed labels contain information needed to service the drive. Other labels are used to seal out dirt and contamination.

3.2   Configuring the Drive

Each drive on the Serial ATA interface connects in a point-to-point configuration with the Serial ATA host adapter. There is no master/slave relationship because each drive is considered a master in a point-to-point relationships. If two drives are attached on one Serial ATA host adapter, the host operating system views the two devices as if they were both "masters" on two separate ports. Both drives behave as if they are Device 0 (master) devices.

3.2.1   Serial ATA Cables and Connectors

The Serial ATA interface cable consists of four conductors in two differential pairs, plus three ground connections. The cable size may be 30 to 26 AWG with a maximum length of one meter (39.37 in). Refer to **Table 10** for connector pin definitions. Either end of the SATA signal cable can be attached to the drive or host.

For direct backplane connection, the drive connectors are inserted directly into the host receptacle. The drive and the host receptacle incorporate features that enable the direct connection to be hot pluggable and blind mateable. For installations which require cables, users can connect the drive as shown in **Figure 3**.

Figure 3   Attaching SATA Cabling
Each cable is keyed to ensure correct orientation. FireCuda drives support latching SATA connectors.

3.3   Drive Mounting

Users can mount the drive in any orientation using four screws in the side-mounting holes or four screws in the bottom-mounting holes. Refer to **Figure 4** for drive mounting dimensions. Follow these important mounting precautions when mounting the drive:

- Allow a minimum clearance of 0.030 in (0.76 mm) around the entire perimeter of the drive for cooling.
- Use only M3 x 0.5 mounting screws.
- Do not overtighten the mounting screws. Maximum torque: 4.0 in-lb (0.4519 N-m).
- Four (4) threads (0.080 in, 2.032 mm) minimum screw engagement recommended.
- Avoid excessive drive distortion when mounting. Refer to the following specifications for stiffness/deflection information:

Top cover stiffness/deflection	
Operating: no performance degradation, emitted noise, mechanical damage, or hard errors	10 mm probe: 2.0kgf (typical)
Non-operating: no hard errors	10 mm probe: maximum 2.0kgf (instantaneous)

4.0 Serial ATA (SATA) Interface

These drives use the industry-standard Serial ATA interface that supports FIS data transfers. It supports ATA programmed input/output (PIO) modes 0–4; multiword DMA modes 0–2, and Ultra DMA modes 0–6. The drive also supports the use of the IORDY signal to provide reliable high-speed data transfers.

For detailed information about the Serial ATA interface, refer to the *Serial ATA: High Speed Serialized AT Attachment* specification.

4.1 Hot-Plug Compatibility

FireCuda drives incorporate connectors which enable users to hot plug these drives in accordance with the Serial ATA: High Speed Serialized AT Attachment specification revision 2.0. This specification can be downloaded from www.serialata.org. This device requires a COMRESET from the host after a hotplug event.

4.2 Serial ATA Device Plug Connector Pin Definitions

Table 10 summarizes the signals on the Serial ATA interface and power connectors. Refer to the **Notes** below.

Table 10   Serial ATA Connector Pin Definitions

Segment	Pin	Function	Definition
Signal	S1	Ground	2nd mate
	S2	A+	Differential signal pair A from Phy
	S3	A-	
	S4	Ground	2nd mate
	S5	B-	Differential signal pair B from Phy
	S6	B+	
	S7	Ground	2nd mate
Key and spacing separate signal and power segments			
Power	P1	V33	3.3V power
	P2	V33	3.3V power
	P3	V33	3.3V power, pre-charge, 2nd mate
	P4	Ground	1st mate
	P5	Ground	2nd mate
	P6	Ground	2nd mate
	P7	V5	5V power, pre-charge, 2nd mate
	P8	V5	5V power
	P9	V5	5V power
	P10	Ground	2nd mate
	P11	Ground or LED signal	If grounded, drive does not use deferred spin
	P12	Ground	1st mate
	P13	V12	12V power, pre-charge, 2nd mate
	P14	V12	12V power
	P15	V12	12V power

Notes

1. All pins are in a single row, with a 1.27 mm (0.050 in) pitch.
2. The comments on the mating sequence apply to the case of backplane blindmate connector only. In this case, the mating sequences are:
   - the ground pins P4 and P12.
   - the pre-charge power pins and the other ground pins.
   - the signal pins and the rest of the power pins.
3. There are three power pins for each voltage. One pin from each voltage is used for pre-charge when installed in a blind-mate backplane configuration.
4. All used voltage pins (V_x) must be terminated.

4.3 Supported ATA Commands

Table 11 lists Serial ATA standard commands that the drive supports. For a detailed description of the ATA commands, refer to the *Serial ATA International Organization: Serial ATA* (Revision 2.6). Refer to www.sata-io.org.

Refer to **S.M.A.R.T. commands** on page 30 for details and subcommands used in the S.M.A.R.T. implementation.

Table 11   Supported ATA commands

ATA-standard commands names	Command code (in hex)

Security Freeze Lock	F5h
Security Disable Password	F6h

4.3.1 Identify Device command

The Identify Device command (command code EC$_H$) transfers information about the drive to the host following power up. The data is organized as a single 512-byte block of data, whose contents are shown in **Table 12**. All reserved bits or words should be set to zero. Parameters listed with an "x" are drive-specific or vary with the state of the drive. Refer to **Drive Specifications** on page 6 for default parameter settings.

The following commands contain drive-specific features that may not be included in the Serial ATA specification.

Table 12   Identify Device command

Word	Description	Value
0	Configuration information: • Bit 15: 0 = ATA; 1 = ATAPI • Bit 7: removable media • Bit 6: removable controller • Bit 0: reserved	0C5A$_H$
1	Number of logical cylinders	16,383
2	Specific configuration	C837H
3	Number of logical heads	16
4	Retired	0000$_H$
5	Retired	0000$_H$
6	Number of logical sectors per logical track: 63	003F$_H$
7–9	Retired	0000$_H$
10–19	Serial number: (20 ASCII characters, 0000$_H$ = none)	ASCII
20	Retired	0000$_H$
21	Retired	8000$_H$
22	Obsolete	0004$_H$
23–26	Firmware revision: (8 ASCII character string, padded with blanks to end of string)	x.xx
27–46	Drive model number: (40 ASCII characters, padded with blanks to end of string)	ST2000LX001 ST1000LX015 ST500LX025
47	(Bits 7–0) Maximum sectors per interrupt on Read multiple and Write multiple (16)	8010$_H$
48	Trusted Computing Feature set options	4001$_H$
49	Standard Standby timer, IORDY supported and may be disabled	2F00$_H$
50	Capabilities	4000$_H$
51	PIO data-transfer cycle timing mode	0200$_H$
52	Retired	0200$_H$
53	Words 54–58, 64–70 and 88 are valid	0007$_H$
54	Number of current logical cylinders	xxxx$_H$
55	Number of current logical heads	xxxx$_H$
56	Number of current logical sectors per logical track	xxxx$_H$
57–58	Current capacity in sectors	xxxx$_H$
59	Number of sectors transferred during a Read Multiple or Write Multiple command	xxxx$_H$
60–61	Total number of user-addressable sectors This field contains a value that is one greater than the total number of user-addressable sectors. The maximum value that shall be placed in this field is 0FFFFFFFh. The 0FFFFFFFh value applies to all capacities over 137GB (see **Section 2.1, Formatted Capacity** for related information).	ST2000LX001 = 0FFFFFFFh ST1000LX015 = 0FFFFFFFh ST500LX025 = 0FFFFFFFh

Table 12   Identify Device command

Word	Description	Value
62	Retired	0000$_H$
63	Multiword DMA active and modes supported (see note following this table)	xx07$_H$
64	Advanced PIO modes supported (modes 3 and 4 supported)	0003$_H$
65	Minimum multiword DMA transfer cycle time per word (120 ns)	0078$_H$
66	Recommended multiword DMA transfer cycle time per word (120 ns)	0078$_H$
67	Minimum PIO cycle time without IORDY flow control (240 ns)	0078$_H$
68	Minimum PIO cycle time with IORDY flow control (120 ns)	0078$_H$
69	Additional Supported bits Bit 4 means Device Encrypts All User Data on the device. Bit 7 means IEEE1667 protocol is supported.	xx1x$_H$ or xx9x$_H$
70–74	ATA-reserved	0000$_H$
75	Queue depth	001F$_H$
76	Serial ATA capabilities	0D06$_H$
77	ATA-reserved	0000$_H$
78	Serial ATA features supported	0048$_H$
79	Serial ATA features enabled	0048$_H$
80	Major version number	01F0$_H$
81	Minor version number	0029$_H$
82	Command sets supported	746B$_H$
83	Command sets supported	7D69$_H$
84	Command sets support extension	61E3$_H$
85	Command sets enabled	7469
86	Command sets enabled	BC49$_H$
87	Command sets enable extension	61E3$_H$
88	Ultra DMA support and current mode (see note following this table)	xx7F$_H$
89	Security erase time	xxxx$_H$
90	Enhanced security erase time	xxxx$_H$
91	Current APM values	8080$_H$
92	Master password revision code	FFFE$_H$
93	Hardware reset value (see description following this table)	xxxx$_H$
94	Auto acoustic management setting	xxxx$_H$
95	Stream Min. Request Size	0000$_H$
96	Streaming Transfer Time - DMA	0000$_H$
97	Streaming Access Latency - DMA and PIO	0000$_H$
98-99	Streaming Performance Granularity	0000$_H$
100–103	Total number of user-addressable LBA sectors available (see **Section 3.2, Configuring the Drive** for related information) These words are required for drives that support the 48-bit addressing feature. Maximum value: 0000FFFFFFFFFFFFh.	ST2000LX001 = 3,907,029,168 ST1000LX015 = 1,953,525,168 ST500LX025 = 1,953,525,168

Table 12   Identify Device command

Word	Description	Value
104	Streaming Transfer Time - PIO	0000$_H$
105	Reserved	0000$_H$
106	Physical sector size / Logical sector size	6003$_H$
107	Seagate reserved	0000$_H$
108-111	The mandatory value of the world wide name (WWN) for the drive. NOTE: This field is valid if word 84, bit 8 is set to 1 indicating 64-bit WWN support.	Each drive will have a unique value.
112-118	ATA-reserved	0000$_H$
119	Free Fall Protection support (bit 5)	1 = Free Fall Protection supported 0 = Free Fall Protection not supported
120	Free Fall Protection enable/disable (bit 5)	1 = Free Fall Protection feature is enabled 0 = Free Fall Protection feature is disabled
121–127	ATA-reserved	0000$_H$
128	Security status	0021$_H$
129–159	Seagate-reserved	*xxxx*$_H$
160–221	ATA-reserved	0000$_H$
222	Transport major version number	101F$_H$
223–254	ATA-reserved	0000$_H$
255	Integrity word	xxA5$_H$

Note	See the bit descriptions below for words 63, 88 and 93 of the Identify Drive data. (on next page)

Table 13   Bit Descriptions

Description (if bit is set to 1)	
Bit	**Word 63**
0	Multiword DMA mode 0 is supported.
1	Multiword DMA mode 1 is supported.
2	Multiword DMA mode 2 is supported.
8	Multiword DMA mode 0 is currently active.
9	Multiword DMA mode 1 is currently active.
10	Multiword DMA mode 2 is currently active.
Bit	**Word 88**
0	Ultra DMA mode 0 is supported.
1	Ultra DMA mode 1 is supported.
2	Ultra DMA mode 2 is supported.
3	Ultra DMA mode 3 is supported.
4	Ultra DMA mode 4 is supported.
5	Ultra DMA mode 5 is supported.
6	Ultra DMA mode 6 is supported.
8	Ultra DMA mode 0 is currently active.
9	Ultra DMA mode 1 is currently active.
10	Ultra DMA mode 2 is currently active.
11	Ultra DMA mode 3 is currently active.
12	Ultra DMA mode 4 is currently active.
13	Ultra DMA mode 5 is currently active.
14	Ultra DMA mode 6 is currently active.
Bit	**Word 93**
13	1 = 80-conductor cable detected, CBLID above VIH 0 = 40-conductor cable detected, CBLID below VIL

4.3.2 Set Features command

This command controls the implementation of various features that the drive supports. When the drive receives this command, it sets BSY, checks the contents of the Features register, clears BSY and generates an interrupt. If the value in the register does not represent a feature that the drive supports, the command is aborted. Power-on default has the read look-ahead and write caching features enabled.

The acceptable values for the Features register are defined as follows:

Table 14   Set Features command values

02_H	Enable write cache *(default)*.
03_H	Set transfer mode (based on value in Sector Count register). Sector Count register values: 00_H Set PIO mode to default (PIO mode 2). 01_H Set PIO mode to default and disable IORDY (PIO mode 2). 08_H PIO mode 0 09_H PIO mode 1 $0A_H$ PIO mode 2 $0B_H$ PIO mode 3 $0C_H$ PIO mode 4 *(default)* 20_H Multiword DMA mode 0 21_H Multiword DMA mode 1 22_H Multiword DMA mode 2 40_H Ultra DMA mode 0 41_H Ultra DMA mode 1 42_H Ultra DMA mode 2 43_H Ultra DMA mode 3 44_H Ultra DMA mode 4 45_H Ultra DMA mode 5 46_H Ultra DMA mode 6
55_H	Disable read look-ahead (read cache) feature.
82_H	Disable write cache
AA_H	Enable read look-ahead (read cache) feature *(default)*.
$C1_H$	Disable the Free Fall Protection feature (41_H above enables the Free Fall Protection feature)
$F1_H$	Report full capacity available

Note	At power-on, or after a hardware or software reset, the default values of the features are as indicated above

4.3.3   S.M.A.R.T. commands

S.M.A.R.T. provides near-term failure prediction for disk drives. When S.M.A.R.T. is enabled, the drive monitors predetermined drive attributes that are susceptible to degradation over time. If self-monitoring determines that a failure is likely, S.M.A.R.T. makes a status report available to the host. Not all failures are predictable. S.M.A.R.T. predictability is limited to the attributes the drive can monitor. For more information on S.M.A.R.T. commands and implementation, see the *Draft ATA-5 Standard.*

SeaTools diagnostic software activates a built-in drive self-test (DST S.M.A.R.T. command for D4$_H$) that eliminates unnecessary drive returns. The diagnostic software ships with all new drives and is also available at: http://www.seagate.com/support/downloads/seatools/.

This drive is shipped with S.M.A.R.T. features disabled. Users must have a recent BIOS or software package that supports S.M.A.R.T. to enable this feature. The table below shows the S.M.A.R.T. command codes that the drive uses.

Table 15   S.M.A.R.T. Commands

Code in features register	S.M.A.R.T. command
D0$_H$	S.M.A.R.T. Read Data
D2$_H$	S.M.A.R.T. Enable/Disable Attribute Autosave
D3$_H$	S.M.A.R.T. Save Attribute Values
D4$_H$	S.M.A.R.T. Execute Off-line Immediate (runs DST)
D5$_H$	S.M.A.R.T. Read Log Sector
D6$_H$	S.M.A.R.T. Write Log Sector
D8$_H$	S.M.A.R.T. Enable Operations
D9$_H$	S.M.A.R.T. Disable Operations
DA$_H$	S.M.A.R.T. Return Status

Note	If an appropriate code is not written to the Features Register, the command is aborted and 0*x*04 (abort) is written to the Error register.

S E A G A T E
